THE PIGMENTARY SYSTEM: PHYSIOLOGY AND PATHOPHYSIOLOGY

The most comprehensive and integrated book on pigmentation

SECOND EDITION

Edited by: **James J. Nordlund, Raymond E. Boissy, Vincent J. Hearing, Richard A. King, William S. Oetting, Jean-Paul Ortonne**

The Pigmentary System gathers into one convenient all-inclusive volume a wealth of information about the science of pigmentation and all the common and rare clinical disorders that affect skin color. The two parts, physiology (science) and pathophysiology (clinical disorders), are complementary and annotated so that those reading one part can easily refer to relevant sections in the other.

Publication date: April 2006

ISBN: 1405120347

ISBN-13: 9781405120340

Pages: 1248

New features of the second edition include:

- Completely new and up to date first part on the basic science of pigmentation and the integration of melanocyte functions with other epidermal cells and with various organ systems like the immune system
- New chapters on pigmentary disorders related to intestinal diseases, the malignant melanocyte, benign proliferations of melanocytes (nevi) and phototherapy with narrow band UV
- Clinical chapters in part two are all updated on the genetic basis of the disorder and recent advances in therapy
- More than 400 color images of virtually all clinical disorders
